

Water Jet Cutting Services

Advantages

Our Flow Abrasive Water Jet cutting machine uses a high velocity stream of water mixed with abrasive particles to cut a variety of materials for the fabrication and manufacturing of parts.

- Cut all materials from, rubber and plastics, aluminum and hardened steels, to glass and granite.
- Cuts parts up to 6x12 feet in dimension and 8 inches thick.
- Our Water Jet cutter has an upgraded pressure output of 94,000 PSI, which means it cuts fast...
- And with a 0.003 output tolerance, the precision and accuracy of this machine is above all.
